* Note that BIS has issued a CCATS determination of EAR99 for Neptune's Back Pressure Valves, but due to the interchangeability of back pressure valves and pressure relief valves, Neptune has decided to treat the Back Pressure Valves as 2B350 for internal compliance purposes. Counsel for Neptune also has had verbal communications with a BIS engineer indicating that the liquid heads are not controlled under 2B350, however, until a formal CCATS determination is obtained, Neptune will treat these as controlled.
