

# Neptune

JUNE 2007

Vol. 25, No. 2

## **NEW** ▲ **CORPORATION** **STOP BULLETIN CS-07** (enclosed)

Neptune Corporation Stops have been improved by changing to a lever-operated stop instead of the old style wrench-operated stop.

In addition to adding the lever-operated valve, the new design allows us to offer, for the first time, a corporation stop and quill in all stainless steel construction.

## **NEW PZ PUMP** **BULLETIN PZ-07** (enclosed)

Powerful control features are listed in the chart on page 2 and supported by schematics and additional information on pages 8 and 9. All flow rates and capacities appear on page 3, and materials of construction appear on page 4.

Type  
PZi4

Type  
PZiG

*This month's issue announces product and literature changes that we hope are of great interest to you.*

## ◀ **EXPLOSION-PROOF** **LIQUID POLYMER** **BLEND AND FEED**

Polymer Prep Units for hazardous areas are now available from Neptune with the Gatlin mechanical mixer. Capacities from 15 GPH to 3,000 GPH of prepared solution available with manual or automatic polymer feed rate control. All stainless steel frame elevates the control panel for ease of use. Flow diagram and controls are the same as the Polymaster.

Models PZD-32/52 and all PZiG Models have built-in calibration and allow accurate direct entry of feed rate in ml/min. The flow checker is available to measure flow on the smaller models.

The new PZiG Models offer impressively high flow rates and pressures (20 GPH). All of the programmable features are onboard every pump including pH Control and Residual Chlorine Control without requiring a separate PID Controller.

## **BYPASS** ▶ **FEEDERS** **WITH** **CARTRIDGE** **FILTERS**

Bypass Feeders have been redesigned to allow a more convenient and economical cartridge style filter. Models DBFC-2 and DBFC-5 accept the new style cartridge filter and holder as shown in the photo. (Must order DBFC models as filters will not mount in standard DBF models.)

*Please consider us for your next application.*
